

ARE YOU SMARTER THAN YOUR SMART PHONE?

Social Media 101

DON'T RECREATE THE WHEEL... REPOST IT INSTEAD!

Reposting - Not Native on Insta

Unlike Twitter and Facebook, reposting on Instagram is not native to the app. There are a number of ways to repost, including taking a screenshot of the content and asking the content creator to tag you in the content. However, one of the easiest ways is to use a secondary app like Repost.

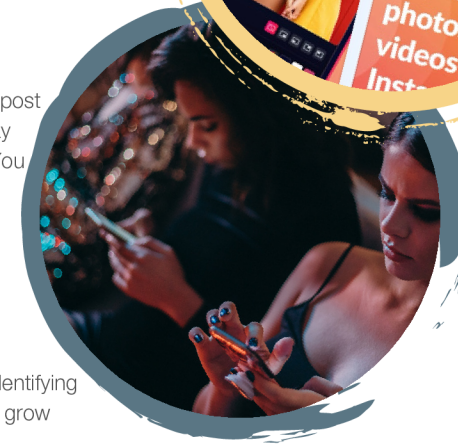

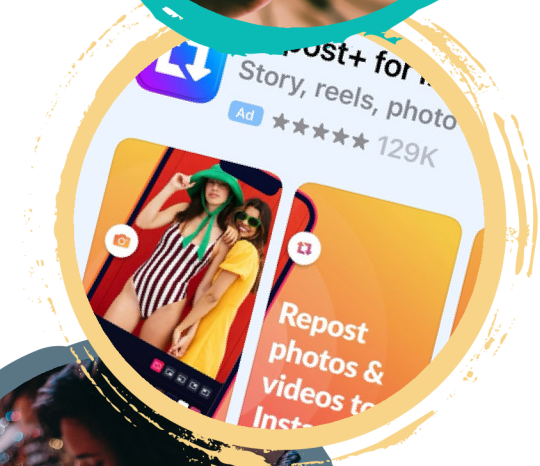

Download A Reposting App

In the app store or the Android market, download the repost app. We use Repost because it has over 120K reviews. There is a free and a paid version. You may find dozens of apps that allow you to repost directly from your smartphone. You may repost using your own description or repost the content from the original post.

Repost...Give Credit!

Repost gives you the option of reposting the content without the watermark identifying where the content originated. We always believe in citing the source. It helps grow your followers and theirs!

Join us for our ongoing series, Are You Smarter Than Your Smartphone at the National Press Club with national digital content director Xavier Underwood. Visit BassPublicAffairs.com/smartphone to register.
